Foreign Agricultural Trade of the United States

FATUS

September/October 1990

Sales Information

Foreign Agricultural Trade of the United States is available on a subscription basis. Subscription includes six bimonthly issues and two annual supplements. Subscription rates are \$25 domestic; \$31.25 foreign. Send check or money order payable to "ERS-NASS" to:

ERS-NASS
P.O. Box 1608
Rockville, MD 20850-1608

For faster service or more information, call **1-800-999-6779**.

Prepared by the Commodity and Trade Analysis Branch, Commodity Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators are Thomas A. Warden and Mary L. Fant. Shirley E. Brown and Traci C. Curry provide word processing and table formatting support. Editorial support is furnished by Jim Carlin, Research Information Branch, Information Division, Economics Management Staff. Data processing support is provided by Sharlan Starr and William Meiller, International Economic Systems Branch, Data Services Center.

Digest

U.S. Agricultural Exports Reach \$37 Billion (see p. 2). U.S. exports during the first 11 months of fiscal year 1990 (October 1989-August 1990) remained close to \$37 billion. Exports were little changed compared with the first 11 months of FY 1989 as offsetting factors steadied exports. Positive factors included an improved share of world cotton and corn trade, strong import demand from the Soviet Union, and higher reported exports to Canada. Negative factors included a reduced share of world wheat trade and lower grain and oilseed prices.

Imports Gain 4 Percent (see p. 7). U.S. agricultural imports amounted to \$20.8 billion during October-August 1989/90, up 4 percent from the same months the previous year. Increased competitive farm product purchases abroad accounted for the gain, more than offsetting a 10-percent decline in noncompetitive commodities.

Fruit and Vegetable Imports Follow Strong Seasonal Patterns (see p. 8). U.S. imports of fresh fruits and vegetables generally follow established seasonal patterns owing to production patterns and perishability. Seasonal indexes measure the extent to which a given monthly shipment is likely to be above or below average. The increase in fruit and vegetable imports and the proliferation of suppliers has affected the indices over the years.

Agricultural Exports Under Government-Financed Programs Drop Slightly in Value during FY 1989 (see p. 11). U.S. agricultural exports with Government assistance during FY 1989 fell slightly to less than \$1.5 billion. Total volume dropped 16 percent to 7.2 million tons from the previous year. Government program shipments accounted for 4 percent of total U.S. farm product export value in 1989. P.L. 480 made up 80 percent of all Government program exports. Leading recipients were Egypt, Pakistan, and Bangladesh.

U.S. Trade Benefits Economy (see p. 23). U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1989 stimulated another \$1.52 (an additional \$61 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 1,055,000 full-time civilian jobs, including 629,000 jobs in the nonfarm sector.

U.S. Agricultural Exports Reach \$37 Billion

U.S. exports during the first 11 months of FY 1990 (October 1989-August 1990) remained close to \$37 billion. Exports were little changed compared with the first 11 months of FY 1989 as offsetting factors steadied exports. Positive factors included an improved share of world cotton and corn trade, strong import demand from the Soviet Union, and higher reported exports to Canada. Negative factors included a reduced share of world wheat trade and lower grain and oilseed prices.

Exports to Canada rose from \$2 billion to \$3.4 billion, a 70-percent increase. In this case, however, comparison between 1989 and 1990 is difficult because of a change in how exports to Canada are recorded in official U.S. Government statistics. Before 1990, U.S. exports to Canada were underreported: in 1989, the United States reported agricultural exports to Canada about \$1.3 billion smaller than Canada's reported agricultural imports from the United States. The decision to rely on Canadian import data to describe U.S. exports to Canada eliminated this underreporting beginning in January 1990. Since research has shown that about 40 percent of all U.S. agricultural exports to Canada were unreported in 1989, we can assume that about 40 percent of the \$2.9 billion reported during January-August 1990 would have gone unreported under the old system.

Therefore, of the \$1.4-billion increase in exports to Canada, about \$1.1 billion stems from the elimination of underreporting. The remaining \$300 million represents an actual increase in shipments of U.S. goods to Canada. A strong Canadian dollar, a result of efforts to control inflation, increased the attractiveness of U.S. products to Canadian consumers. This affected trade in nonagricultural goods, even before the change in reporting. Canadian import statistics showed a negative Canadian trade balance in December 1989, only the second monthly trade deficit in 14 years.

Virtually every agricultural commodity showed increased exports to Canada in 1990. Soybean meal exports to Canada fell 17 percent, but this was one of the few products not apparently undercounted in recent years. Meat exports to Canada were 100 percent higher, and most other animal products were higher as well. Animal product exports to Canada totaled \$300 million higher. Vegetables and preparations also rose 100 percent for a \$300-million gain. Highly processed

grain products rose by 100 percent and most other high-value exports rose by similar percentages.

Animal Product Exports Steady

Since Canada is the single most important market for U.S. fruits, vegetables, and other horticultural products, increased exports to Canada raised the value of U.S. horticultural exports about 25 percent compared with 1989. However, U.S. animal product exports rose only slightly in 1990, remaining near \$6 billion, despite the \$300-million increase.

U.S. exports of animal products rose a total of 60 percent between 1985 and 1989, and 1990 marks the first year since 1985 without a sizable increase. This 60-percent growth was the strongest performance of any commodity group. Japan accounts for about one-third of all U.S. livestock exports and has accounted for much of the U.S. gain since mid-decade. Japan's increased meat imports were induced by strong economic growth and a strong currency and abetted by import liberalization. Liberalization increased import quotas, and increased demand led to increases even in nonquota categories of beef during the second half of the 1980's.

Meat exports to Japan fell \$100 million in 1990 to \$1.3 billion. Meat exports to the European Community (EC) also fell due to an EC ban on imports of meat from animals treated with growth-promoting hormones. Variety meat exports to the EC totaled \$19 million during the first 11 months of FY 1990, compared with \$98 million 2 years earlier. Exports of meat and other animal products to Mexico also fell in 1990, following very large increases in 1989.

Increased shipments to Korea and the USSR helped offset lower exports to Japan, the EC, and Mexico. Liberalization boosted Korea's beef imports, and the onset of extensive changes in Eastern Europe and the USSR led to increased imports by those countries as well.

The USSR became the largest single market for U.S. poultry meat, importing 101,000 tons, nearly 20 percent of all U.S.-shipped poultry meat. However, the USSR bought low-priced parts, those less preferred by U.S. consumers, and paid an average of \$729 per ton. In contrast, Japan paid \$1,274 per ton. The U.S. customers paying prices most similar to the USSR's were Jamaica (\$820) and Romania (\$667). Because of these lower prices, the USSR ranked as the fourth largest market for poultry meat when measured by value rather than volume, after Japan, Canada, and

Hong Kong. However, the USSR was easily the largest market for dairy products following a \$57-million butter purchase. These purchases stemmed from efforts to maintain consumer supplies.

Soviet efforts to maintain supplies also helped support export prices for U.S. grain in 1990. Exports to the USSR fell 1.7 million tons to 20 million tons, as wheat exports fell more than corn exports rose, but the total still remained close to 1989's record. In 1989, U.S. corn exports to the USSR shot up 10 million tons. Record USSR corn purchases continued in 1990 despite a rebounding USSR grain crop that once again approached 200 million tons. Producers in the USSR were reluctant to market grain to the state in return for rubles. Even assurances of access to internationally convertible currency in exchange for grain failed to persuade producers to part with their grain, still preferring ownership of barterable goods.

Similar problems surfaced in Eastern Europe during 1990. In addition to purchasing poultry meat, Romania also purchased pork and butter. Romania has traditionally been a significant exporter of food, with the USSR as one of its markets. Following Romania's change in government, domestic consumption of some traditionally exported items rose, and some products were imported to add to consumption. Reduced availability from Eastern European suppliers may account for some increased sales to the USSR, although localized problems with economic transition may account for much of the increase as well. The transition from centralized planning to allocation through market signals helped reduce GNP in several Eastern European countries and the USSR in 1990, affecting agriculture in each country.

Increased Corn Exports Offset Lower Wheat Shipments

U.S. corn exports also benefited from a relative paucity of feed wheat on world markets during 1990, and exports to most destinations rose, leading to an 8-million-ton gain overall. Export volume totaled 57 million tons, and the United States captured one of its largest shares of world trade ever. Sales to Mexico were up 1.7 million tons, Taiwan up 1.5 million tons, Western Europe up 1.2 million tons, and Japan up 1 million tons. With steady sales to the USSR and increased sales elsewhere, the average price of U.S. corn exports fell only 5 percent despite the recovery of U.S. production from 1988's drought. In 1989, a 56-million-ton decline in production meant the average price

of U.S. corn exports rose from \$96 per ton to \$122 per ton. Prices fell to \$115 per ton in 1990.

Wheat prices also averaged only slightly lower for the 11-month period but were declining steadily through much of the year. Wheat prices peaked early, rising from \$162 per ton in October to \$163 per ton in November. Prices fell steadily after January, totaling \$132 per ton in August. Lower market prices for wheat also drove Export Enhancement Program (EEP) bonuses higher, further reducing the average unit value of exported wheat. For example, while the average price of wheat exported to Japan in August was an above-average \$147 per ton, Poland's wheat averaged just \$96 per ton. The average price of wheat to a given destination also depends on the wheat's class, grade, and other standards, but with large supplies of wheat on world markets, EEP bonuses increase to where they are also an important influence.

Unlike corn, U.S. wheat exports lost market share in 1990 for the second consecutive year. Export volume fell 8 million tons, just about offsetting corn's increased volume. Exports to China fell 4 million tons, and China slipped to second place as a U.S. wheat market. Substantially lower exports to China made the USSR the number one market, despite a 1.5-million-ton drop in shipments to the USSR. Exports to North Africa fell 1.4 million tons, and exports to South Asia fell 1.7 million tons.

Cotton Prices, Volume, and Market Share Range Higher

Cotton exports rose \$690 million, the only other significant increase besides coarse grains not due almost entirely to revised reporting procedures with Canada. Cotton's performance was the opposite of every other major U.S. export commodity in at least one respect. Lower grain prices were discussed above, and soybean prices fell as well; but cotton prices rose 16 percent to \$1,624 per ton, the highest since FY 1981. Market share rose for U.S. cotton and for corn and fell for wheat and soybeans. Cotton export volume rose from 1.3 million tons to 1.6 million.

Since the United States is typically the global residual supplier for cotton and other bulk products, U.S. export volume of each product tends to do well in markets at about the same time its price rises. In 1990, the lowest cotton stocks-to-use ratio in many years boosted prices, and lack of competitor supplies boosted U.S. share and volume simultaneously. Wheat and soybeans suffered both falling prices and falling U.S.

share, although the volume of soybean exports rose thanks to a post-drought recovery in U.S. production. Corn prices fell in 1990, but only because of the same post-drought recovery in production that cut soybean

and soybean meal prices. Corn prices fell substantially less than soybean prices, and export volume rose at just about the same 20-percent rate. (Stephen MacDonald, Commodity and Trade Analysis Branch)

Table 1--Agricultural, nonagricultural, and total trade balance

Item	October-August		August

Imports Gain 4 Percent

U.S. agricultural imports during October-August 1989/90 totaled \$20.8 billion, 4 percent above the same 11-month period a year earlier. All of the increase occurred in competitive products, notably live cattle, beef, pork, fruits and vegetables, sugar, tobacco, wine, and beer. A 10-percent drop in the value of noncompetitive imports mainly followed lower prices for coffee and crude rubber.

Live cattle imports rose to a record 1.8 million head this year, 62 percent above October-August 1988/89's level. Favorable U.S. prices attracted Mexican steers and Canadian slaughter cattle. The combination of dry weather, reduced export duties, and removal of export restrictions by the Mexican Government has resulted in U.S. imports of more than 1.1 million head from Mexico thus far this year.

Beef import volume expanded 11 percent during the first 11 months of 1989/90, and higher prices raised

import value by 19 percent to almost \$1.7 billion. Larger shipments from Australia, where dry conditions prevailed in late 1989 and early 1990, more than compensated for sharply lower exports from New Zealand where slaughter is lower due to herd rebuilding.

Fruit import value in 1989/90 expanded more than 10 percent, principally because of table grapes from Chile. Grape imports from Chile surged 39 percent to \$256 million this year, in part because the cyanide scare depressed 1988/89 import levels. Orange juice imports were also up sharply to \$620 million because of reduced production in Florida and larger Brazilian supplies.

Vegetable imports rose 17 percent to \$2.1 billion during October-August, with tomatoes, asparagus, garlic, onions, peppers, and squash from Mexico showing strong growth over year-earlier levels. (Thomas A. Warden, Commodity and Trade Analysis Branch)

Fruit and Vegetable Imports Follow Strong Seasonal Patterns

U.S. imports of fresh fruits and vegetables generally follow established seasonal patterns. This is often due to their perishable nature. Once harvested, they are consumed or processed within a short period of time. Another reason is that crops in Southern Hemisphere countries are harvested and shipped to the United States in the winter and early spring, months before U.S. production is available.

Seasonal Indices

Seasonal indices measure the extent to which shipments are likely to be above or below average. For example, the United States imported 122,000 tons of apples in 1988 for an average of 10,200 tons per month. Any monthly figure exceeding 10,200 tons has an index number greater than 100. Likewise, a monthly figure below 10,200 tons will have an index number less than 100. The indices represent estimates based on 8 years of data. Tables 5 and 6 show seasonal indices for 33 individual fruit and vegetable imports. To illustrate their use, apple imports during October are approximately half their annual average, but shipments in May, the peak month for imported apples, are 2.2 times the average. Likewise, cherry imports are almost nonexistent from April through October with virtually all imported cherries coming in during December, January, and February.

Seasonal indices serve several purposes. They explain much of the fluctuation in monthly imports for a given commodity. Apple imports jumped from 3,972 tons in February 1988 to 16,403 tons in March, a four-fold increase. Since the index numbers estimated for those months increased from 49 to 115, we had expected a large jump. The remainder of the increase can be attributed to price or some event in the exporting country. The shipping season for Chilean grapes, for example, is in full swing by January, peaking in April. On average, March grape imports from Chile are two-thirds greater than those in February. In March 1989, however, two grapes containing cyanide were found in a shipment from Chile. This temporarily halted all grape shipments from that country.

Seasonal Patterns Shift

One hazard of working with seasonal indices is that they cannot show when a seasonal pattern has

changed. In the early 1980's, the shipping season for Chilean grapes began in February or March and peaked in April. By 1987, the shipping season had moved up a month or two and was in full swing by January. This change altered the seasonal index.

Imports of fresh fruits and vegetables jumped from \$1 billion in 1980 to \$2.5 billion in 1989. This 150-percent increase included an increase in the number of suppliers. In 1982, four countries supplied at least 1,000 tons of melons to the United States, and Mexico had a 60-percent share. In 1989, Mexico maintained a 59-percent share, but, by then, nine countries supplied at least 1,000 tons of melons each to the United States.

The proliferation of suppliers has affected the indices over the years. The shipping pattern of an individual country is more statistically significant than the combined shipping pattern of all suppliers. For commodities that are purchased year-round, the total might not show a distinct pattern. Yet, there might be three to four suppliers who ship during a 3-4 month period. Apples and grapes display this pattern. But, when a country dominates the supply of a particular fruit or vegetable, and the secondary supplier fills in when there is a shortage, the significance of the total is greater than that for any individual country. In this category are cucumbers, eggplant, onions, squash, peppers, tomatoes, waterchestnuts, apricots, oranges, pears, raisins, and strawberries.

Another pattern is country seasonality in which each country has a distinct season. This is the case with celery, garlic, apples, cantaloupes, grapes, oranges, pears, and raspberries. For example, Canada ships apples steadily from October through June, peaking in November. Chile and New Zealand, however, ship heavily for 3-4 months, with Chilean apples peaking in April, and New Zealand peaking in June.

The more storable a commodity, the more equal are its monthly shipments. For example, potato imports from Canada are high November through June, but never exceed 185 percent of the monthly average. Virtually all Canadian celery, however, comes in during a 3-month period, August-October. (Stephen R. Milmo, Commodity and Trade Analysis Branch)

Agricultural Exports Under Government-Financed Programs Drop Slightly in Value during FY 1989

FY 1989 U.S. agricultural exports under Government-financed programs totaled on a preliminary basis just under \$1.5 billion and 7.2 million tons, down 2 percent in value and 16 percent in volume. Lower shipments of wheat and wheat products, soybean oil, and nonfat dry milk accounted for almost all of the decline. FY 1988 shipments of 8.6 million tons were valued at more than \$1.5 billion. As in FY 1987, Government-financed exports accounted for only 4 percent of total U.S. agricultural export value in FY 1989 and 1988. The vast bulk of these exports was shipped under P.L. 480, but some was also provided under Section 416(b) of the Agricultural Act of 1949, as amended. Sizable quantities were also shipped under programs administered by the Agency for International Development (AID).

Agricultural exports under P.L. 480 accounted for about 80 percent and 75 percent of all Government program shipments in FY 1989 and 1988, respectively. In 1988, exports under P.L. 480 rose 23 percent in value to approximately \$1.2 billion, with the usual 60-percent share moving under the Title I/III concessional sales program, and declined 4 percent in volume to about 6 million tons. In 1989, however, the increase in the value of P.L. 480 exports was only 3 percent and the decline in volume was 14 percent.

The majority of P.L. 480 exports are Title I/III cash sales for local currency and concessional long-term credit sales. Shipments under Title I/III reached a total of \$722 million in 1989 and \$693 million in 1988, accounting for 60 percent of total P.L. 480 exports and more than 40 percent of total Government programs in both fiscal years.

Exports under P.L. 480 Title I/III long-term credit sales decreased 5 percent to \$660 million in FY 1988, and then increased 7 percent to \$703 million in FY 1989. Egypt, Pakistan, and Bangladesh were the principal Title I/III importers, taking 25, 12, and 9 percent of the total value in FY 1989. Other major Title I/III recipients were El Salvador (7 percent), Morocco (6 percent), and Sri Lanka (5 percent). Of the seven commodities shipped, wheat, wheat flour, and soybean oil accounted for almost 80 percent of total shipments. Egypt, Bangladesh, and Sri Lanka received more than half of the wheat exports, while Pakistan, Morocco, and Egypt received most of the soybean oil. Egypt alone took more than 75 percent of the wheat flour exports.

Most of Title I/III exports are shipped under concessional credit terms, but Costa Rica, the Dominican Republic, Guatemala, Jamaica, Sri Lanka, and Tunisia have received commodities under local currency cash agreements in one or both FY 1988 and 1989. This total has averaged \$26 million. The proportion of Title I/III exports financed under sales for local currency was 5 percent in 1988 and 3 percent in 1989.

Donations under Title II of P.L. 480 were more than \$460 million in both fiscal years. Increases were registered in all three types of donation programs--government-to-government, World Food Program contributions, and voluntary relief agencies. Most of the increase in Title II shipments, however, was due to a gain in donations distributed through voluntary relief agencies. The bulk of these donations was concentrated in wheat, rice, and corn-soya-milk in both fiscal years. However, the countries' distribution varied somewhat. More than three-fourths of the wheat in 1988 was shipped to Pakistan, Ethiopia, Bangladesh, and Morocco, and in 1989, nearly 67 percent of the wheat was shipped to the same countries, except Afghanistan replaced Morocco. In 1988, the Philippines alone received more than a third of the rice. Almost 40 percent of the rice exports was shipped to Guinea, the Ivory Coast, Liberia, and India in 1989. India alone received 55 and 70 percent of Title II corn-soya-milk exports in 1988 and 1989, respectively. Corn and soybean oil were the other major commodities donated under Title II in both fiscal years. El Salvador, Honduras, Jamaica, and Mozambique were the largest recipients of corn, while India, Ethiopia, Mozambique, and Sudan were the largest recipients of soybean oil.

Overseas donations under Section 416(b) of the Agricultural Act of 1949, as amended, fell in 1989 by 59 percent in volume to about 881,000 tons and almost 60 percent in value to \$107 million. Considerably lower shipments of wheat, and no shipments of high-value dairy products and soybeans were the factors behind this decline. Corn, sorghum, and wheat were the only commodities shipped under the Section 416(b) program in 1989. Bangladesh, Mexico, and the Philippines received more than 80 percent of the wheat exports, while India and Somalia took more than 75 percent of the corn. Mexico, Jordan, and Tunisia received the bulk of the sorghum exports. In 1988, Section 416(b) donations were 2.1 million tons valued at \$279 million. Higher amounts of wheat and corn were provided. Although more commodities were shipped in 1988 than in 1989, corn, wheat, and sorghum accounted for almost 50 percent of total export

value and volume in 1988. The Philippines, Bangladesh, and the Dominican Republic received more than a third of the wheat exports. India, the Dominican Republic, and Mexico were the major recipients of corn.

Total value of food shipments under the AID program rose substantially in 1989 as it did the previous year.

The volume increased more than twofold in FY 1989 to more than 900,000 tons valued at \$187 million due mostly to large quantities of wheat provided to Pakistan. In FY 1988, the export value of the commodities shipped under the program was \$86 million, and the volume was 409,000 tons. (Nydia R. Suarez and Linda Beeler, Trade Programs Section)

1/ Preliminary.

2/ Negative values in the "commercial" column indicate an excess of Government programs over total exports attributed to reporting lags, classification differences, or transshipments through other countries.

3/ Totals may not add due to rounding.

1/ Preliminary.

2/ Negative values in the "commercial" column indicate an excess of Government programs over total exports attributed to reporting lags, classification differences, or transshipments through other countries.

3/ Totals may not add due to rounding.

U.S. Trade Benefits Economy

U.S. agricultural export value increased in 1989 for the third year in a row. Production from more than a third of U.S. cropland moved into export channels. The United States exported an estimated 61 percent of its wheat, 49 percent of its rice, 32 percent of its soybeans, 31 percent of its corn, and 64 percent of its cotton in FY 1990 (October 1989-September 1990).

These exports generated increases in employment, income, and purchasing power in the farm and nonfarm sectors. For example, farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export spurred economic activity in the manufacturing, trade, and transportation sectors.

U.S. agricultural exports peaked in 1981 at \$43.3 billion after years of steady growth but declined 33 percent by 1986. Agricultural exports rose in current dollar values in 1989 to 1980 levels. Bulk and processed agricultural exports provided employment for 1.2 million workers in 1981. Agricultural exports nearly regained that level in 1989, reaching over 1 million workers. Exports in 1981 generated slightly more than \$100 billion in business activity: \$43.3 billion for exports and \$63 billion for supporting activities. Exports generated \$101 billion in business activity in 1989: \$40 billion for exports and \$61 billion for supporting activities. Thus, each dollar received from agricultural exports stimulated another \$1.52 of output in the U.S. economy, a multiplier effect of more than 2. Net exports in 1989 contributed \$18 billion to the U.S. trade balance compared with \$16 billion in 1988.

Exports Generate Added Business Activity

The United States exported \$40 billion of agricultural products in 1989. The value of exported raw products was \$18.9 billion, processed commodities \$14.8 billion, and transportation and trade services for raw and processed products \$6.3 billion.

The \$61 billion in 1989 supporting activity included \$10.5 billion from the farm sector, \$4.9 billion from the food processing sector, \$18.9 billion from other manufacturing sectors, \$7.3 billion from trade and transportation, and \$19.4 billion from other services. Nonfarm sectors of the economy received about 83 percent of the additional economic activity.

Jobs for 1,055,000 Workers

U.S. agricultural exports supported an estimated 1,055,000 full-time civilian jobs in 1989. More than 426,000 U.S. farmworkers, 13 percent of the farm labor force, worked in the production of export commodities. In addition, 629,000 jobs in the nonfarm sector were directly or indirectly related to the assembling, processing, and distributing of agricultural products for export. About 75,000 of these were in food processing, 235,000 in trade and transportation, 118,000 in other manufacturing sectors, and 201,000 in other services.

Bulk Exports Dominate

Bulk agricultural exports (grains, oilseeds, and cotton) accounted for \$20.4 billion, or 51 percent, of the \$40 billion in agricultural exports in 1989. Bulk exports, however, had a smaller proportional effect on the nonfarm economy. Direct bulk exports generated an additional \$26.3 billion of business activity (\$1.29 additional output per dollar of bulk exports compared with the \$1.52 for all agricultural exports). The business activity was distributed differently across economic sectors (4 percent to farming, 38 percent to manufacturing, 44 percent to other services, and 12 percent to wholesale trade and transportation) than the additional business activity for all agricultural exports (17 percent to farming, 31 percent to manufacturing, 32 percent to other services, and 12 percent to wholesale trade and transportation). Of the 1,055,000 jobs related to U.S. agricultural exports, 535,000 (51 percent) supported bulk exports.

Agricultural Exports Bolster U.S. Trade Balance

Agriculture's contribution to the U.S. trade balance increased substantially through the 1970's. Net U.S. agricultural exports (exports minus imports) rose to \$27 billion in 1981 from about \$1 billion in 1969. Net agricultural exports of \$18 billion partially offset a \$144-billion deficit in nonfarm trade in 1989, leaving the U.S. trade balance in deficit by \$126 billion.

The Effect of Agricultural Imports on U.S. Output

The United States imported \$21.8 billion in agricultural commodities in 1989. Some \$6.2 billion of this total was spent on items like bananas, coffee, and tea that did not compete directly with U.S. agriculture. The

balance of \$15.6 billion was spent on imports (such as meat, dairy products, fruits, nuts, vegetables, sugar, and wines) that competed with U.S. products.

Since 1970, noncompetitive farm product imports have been growing at an annual rate of about 5.4 percent. Competitive agricultural imports have grown annually by 7.6 percent. Only competitive imports were included in the input-output (I/O) analysis of the effects of imports on the economy.

Using the I/O model, we estimated that the equivalent domestic output effect of the \$15.6 billion of competitive imports in 1989 was \$40.4 billion. That is, each dollar spent on imports would have required roughly another \$1.59 in supporting goods and services if those imported items had been produced domestically, an output multiplier of about 2.59.

Agricultural Trade Benefits U.S. Economy

Almost all of the direct benefit comes from bulk agricultural exports. The port value of other agricultural exports and imports just about offset each other (table 13). The additional business activity needed to produce the supporting goods and services for exports and the output lost by importing competitive farm products reveals a different picture. The economy-wide 1989 net business surplus for agricultural trade was an estimated \$54.4 billion, a result of \$101 billion of total output generated by farm exports minus \$46.6 billion of agricultural imports (including noncompetitive imports).

U.S. agricultural trade positively affects most sectors of the economy. The farm sector's \$29.4 billion of output associated with agricultural exports more than offset the \$9.4 billion of farm output implicitly lost because of competitive agricultural imports. The food processing sector gained \$6.2 billion in total output, about 19,000 jobs and \$734 million in income.

U.S. agricultural trade benefited meat processors, grain workers, sugar mills, dairy plants, fats and oils workers, and the miscellaneous food sector. Agricultural trade did not benefit canners, freezers and dehydrators, beverage and flavoring makers, and confectioners and bakers.

The U.S. economy outside of farming and food processing directly accrued a net \$4.9 billion from agricultural trade and a net increase in output of \$34.4 billion after considering the domestic output lost to competitive agricultural imports.

Farm Sector Receives Much of Income Benefit

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Although \$1 of agricultural exports in 1989 generated \$2.52 in total (direct and supporting) economic activity, \$1 represented income to wage earners, profits, and taxes.¹ Thus, the \$40 billion of agricultural exports in 1989 generated \$101 billion of total economic activity but \$40 billion of income in the form of wages, profits, and taxes. The distribution of these income effects showed a different pattern for exports and imports.

In 1989, the shares of total income attributed to agricultural exports and competitive imports to the nonfarm sector were 71 percent and 75 percent, respectively, with nonfarm, nonfood sectors of the economy receiving 64 percent of income from agricultural exports and 56 percent of that income attributed to competitive imports. The distribution of the remainder within the farm and food processing sectors differed markedly. The farm sector received 28 percent of the total income from agricultural exports, while the food processing sector received 8 percent, reflecting the importance of raw agricultural commodities in the export bill of goods. The total income effect of competitive imports (a lower level than exports) was more evenly divided between the farm and food processing sectors, with the food processing sector assuming about 17 percent and the farm sector increasing to about 21 percent, reflecting the greater importance of processed food products in the competitive import bill of goods. (William Edmondson and Michelle Robinson, National Economy and History Branch, Agriculture and Rural Economy Division)

¹ This income is directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers can purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. More purchasing power is spread throughout the total economy. The heightened activity, trade, and transportation can boost investment in plants and equipment. Because I/O analysis does not consider this additional income, our estimates of the economywide influences of agricultural trade are conservative.

Other feeds & fodders(MT):	3,497	3,652	742,524	786,907	396	375	81,446	74,375
Fruits & prep, ex juice(MT):	1,945	2,068	1,413,886	1,656,610	154	195	122,428	175,090
Fruits - fr(MT):	1,655	1,748	1,030,264	1,211,477	125	160	83,812	128,376
Fruits - fr - citrus(MT):	978	880	538,536	509,870	52	52	33,092	30,735
Grapefruit - fresh(MT):	472	278	229,665	155,980	12	11	6,179	5,889
Lemons & limes - fresh(MT):	134	129	93,331	97,383	13	12	10,876	9,672
Oranges & tangerines - fresh(MT):	368	472	212,772	255,866	27	29	15,968	15,155
Fruits - fr - noncitrus(MT):	678	868	491,728	701,607	73	108	50,720	97,641
Apples - fresh(MT):	238	329	120,101	167,237	8	13	3,978	9,079
Grapes - fresh(MT):	109	116	104,614	131,085	14	24	13,750	26,758
Other noncitrus - fresh(MT):	331	424	267,013	403,286	51	71	32,992	61,804
Fruits - dried(MT):	145	169	234,389	272,745	14	17	24,236	27,765
Raisins - dried(MT):	85	93	133,783	147,214	9	11	16,045	16,348
Prunes - dried(MT):	52	67	84,067	106,385	4	6	7,402	9,599

See footnotes at end of table.

Appendix table A-1--U.S. agricultural exports: Quantity and value by commodity--continued

Commodity	October-August				August			
	Thousand units		Thousand dollars		Thousand units		Thousand dollars	
	1988/89	1989/90	1988/89	1989/90	1989	1990	1989	1990
Other dried fruits(MT):	9	9	16,539	19,147	0	1	788	1,819
Fruits - canned ex juice(MT):	73	75	74,582	78,329	6	6	6,212	6,653
Fruits - froz ex juice(MT):	29	32	28,031	35,030	4	7	3,918	6,033
Other fruits - prep or pres(MT):	41	46	46,620	59,029	4	5	4,250	6,262
Fruit juices incl froz(HL):	4,573	5,421	241,249	298,882	426	656	21,523	32,396
Orange juice(HL):	2,478	3,011	122,379	150,813	255	397	11,572	18,592
Other fruit juices(HL):	2,095	2,410	118,869	148,069	171	259	9,951	13,804
Wine(HL):	520	751	80,015	96,564	83	82	10,155	10,783
Nuts & prep(MT):	433	520	772,742	842,448	36	31	69,880	57,155
Almonds(shelled basis)(MT):	147	148	454,782	469,863	17	11	50,801	33,918
Peanuts, shelled or prep(MT):	202	284	152,633	178,014	17	17	12,254	12,066
Walnuts, shelled/unshelled(MT):	63	62	99,037	116,594	1	1	1,866	3,135
Pecans, shelled or unshelled(MT):	3	6	8,943	22,293	0	1	1,084	3,573
Other nuts, shelled or prep(MT):	18	20	57,346	55,684	1	1	3,874	4,462
Vegetables & prep(NA):	--	--	1,424,161	1,931,985	--	--	109,780	143,922
Vegetables - fr(MT):	680	1,059	327,539	549,499	34	65	15,172	32,654
Celery - fresh(MT):	61	87	19,315	30,575	2	3	987	1,061
Cauliflower - fresh(MT):	27	52	16,012	31,141	1	2	524	1,344
Lettuce - fresh(MT):	154	186	48,438	81,489	8	13	2,862	5,581
Onions - fresh(MT):	83	108	22,903	34,558	5	9	1,425	2,545
Potatoes - fresh(MT):	115	139	43,101	57,506	6	10	2,562	4,481
Tomatoes - fresh(MT):	75	106	48,468	69,297	4	10	2,410	5,691
Other fresh vegetables(MT):	165	380	129,301	244,933	7	17	4,402	11,951
Vegetables - froz(MT):	253	291	189,677	230,591	21	26	15,931	20,966
Corn, sweet, frozen(MT):	49	54	37,062	42,938	4	4	2,961	3,797
Potatoes - frozen(MT):	150	179	101,550	128,929	13	16	8,779	11,792
Other frozen vegetables(MT):	54	59	51,065	58,724	4	5	4,192	5,376
Vegetables - canned(MT):	148	182	130,632	156,218	12	12	10,626	10,507
Pulses(MT):	463	554	250,511	293,889	39	31	18,662	16,140
Dried beans(MT):	317	360	195,546	224,074	25	19	12,854	11,318
Dried peas(MT):	105	139	34,037	43,466	8	8	2,762	3,385
Dried lentils(MT):	42	54	20,928	26,349	6	5	3,047	2,437
Hops, incl hop ext(MT):	12	13	71,080	82,311	1	1	5,314	4,673
